

# Do Vaccines Stop or Start Pandemics?

**This is the other side of the story, not found on "Tell Lie Vision."**

Did you know that the first vaccine ever, smallpox of 150 years ago, sparked a pandemic which killed hundreds of thousands? Likewise, did you know that the infamous Spanish flu which killed over 50 million people worldwide, was sparked by an American vaccination program and that the only countries unaffected were those that opted out of the vaccination program?

Did you know that all vaccine suppliers have legal immunity from any death or damage caused by their vaccines?

In some parts of the world, the 2010 flu season started earlier than in the United States. People died from the shots, and others are suffering severe injury. All these facts are verifiable, when you do [research](#) according to academically acceptable criteria explained on the We Are Change website.

Last year, vaccine induced miscarriages in the United States occurred often, and during that time pregnant women had been encouraged to take the shots.

One question asked after people learn of this horror is when they will correct their mistakes? It is a difficult question to answer, because the murder and assault are not mistakes. That, of course, does not mean all the people involved in providing vaccinations are aware of the harm they are causing. Another question is why this information is not in the media. The media, for the most part, is controlled.

We, the dwellers together in this world, must join together to inform each other of the truth. Put your phone number on this flyer, then copy and distribute it. Meet in your homes and organize to get this warning out to as many people as possible.
